INCOMING EMAIL FILTERING

Stop Spam, Viruses, Phishing and other Malware!

SPAMEXPERTS' INCOMING FILTERING SERVICE

Email filtering separates legitimate email from unsolicited bulk email with the help of advanced algorithms and spam pattern detection methods. SpamExperts offers this solution, tailored to the needs of Webhosts, ISPs/Telcos and large organizations, as well as Resellers and Distributors.

SpamExperts' inbound anti-spam system offers full Inbox protection and helps increase it at network-level. In this way, end-users are offered maximum control and email continuity, with the perk of saving significant human and network resources:

> SECURE

Protect your clients' inboxes from spam, virus, phishing, harvesting and other malware attacks. The clustered solutions add another redundancy layer to your network. SpamExperts manages the software and monitors all servers and services 24x7 to proactively fix issues that might occur.

> CONTINUOUS

The inbound anti-spam system adds another failover layer to your infrastructure. If your clients' destination mail server is down, the inbound filter will still accept messages and queue them. They will be automatically re-delivered, and can be web-based previewed by clients while working.

> ACCURATE

SpamExperts has an advanced in-house IP-reputation system, combined with a large number of message content classifiers. This allows a filtering accuracy of 99.98% of all inbound spam connections, with a market-leading 0.0001% false positive ratio. SpamExperts processes millions of messages each second of every minute of every hour of every day.

> EFFICIENT

The SpamExperts solution helps you save infrastructure and human resource costs for maintaining open source solutions.

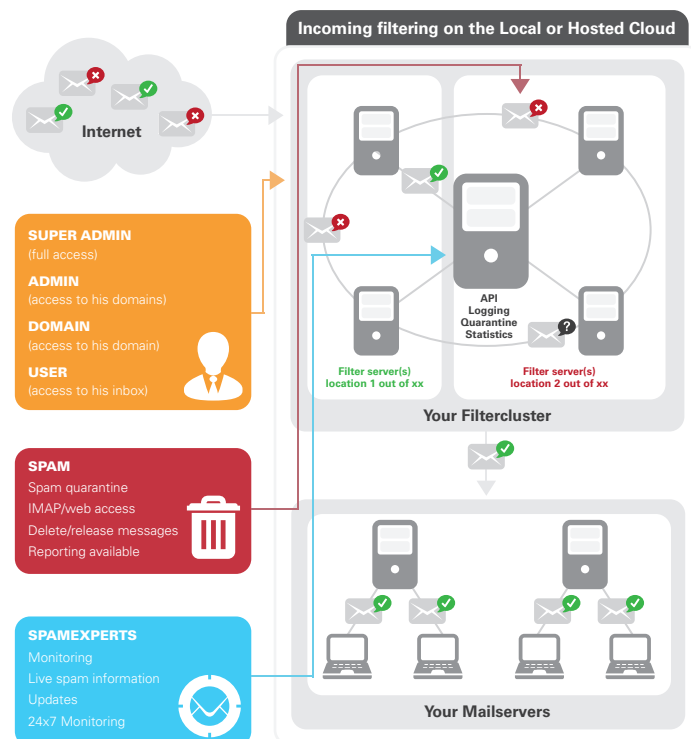

HOW DOES SPAMEXPERTS FILTER INCOMING EMAILS?

> Re-routing of email through filters

The SpamExperts inbound spam filter is a gateway solution. Activation is outstandingly easy and goes via one of the various webhosting plugins freely available, or via a simple DNS adjustment. Once the MX-records are changed, all inbound email goes to the SpamExperts system first, where it is filtered and then relayed to the unchanged destination mail servers of your clients. Literally, you can be spam and virus free, in less than five minutes!

> Deployment

The actual message filtering can be done in the highly redundant SpamExperts Hosted Cloud or locally on your own hardware through the Local Cloud product. Both deployments are SaaS solutions fully managed, maintained, and 24/7/365 monitored by SpamExperts.

Security, Continuity and Efficiency

BENEFITS

If you want to save resources, safeguard your service reputation and offer end-clients a tool to enhance productivity by eliminating spam and viruses, then incoming email filtering is mandatory. Why is the incoming filtering system from SpamExperts the best out there?

1 Safeguard your network from spam, viruses and malware

- Continuously developed in-house technologies
- Unmatched spam intelligence
- Direct detection of new spam and virus outbreaks
- Scalability and redundancy
- Reduced churn through increased user satisfaction

2 Increase employee productivity

- Friendly multi-tier web interface
- Reduced number of wasteful emails
- Enhanced time management

3 Reduce infrastructure load

- Reduce load and bandwidth of your current email infrastructure
- Turn off your own spam filter and reduce the load on your server
- Shared resource performance increases

4 Simplify management

- Always up to date, as new definitions and protection are automatically added to the system
- Fully managed service, freeing your in-house IT resources
- Domain-based
- User-based

FEATURES

- Inbound spam, virus, malware filtering
- Extensive API for integration & automation
- Multi-tier GUI
- Whitelabel options
- Integration with leading control panels (all Parallels products, cPanel, Open-Xchange, ISPsystem, DirectAdmin)
- Compatible with any mail server (Exchange, Zimbra, Postfix, Exim, qmail, Lotus)
- Frequent product updates and upgrades
- Log Search
- Web-based & IMAP based quarantine
- IPv6 support
- PDF / HTML reporting
- Delivery queue
- Automatic user detection and LDAP support
- Advanced filtering statistics and intelligence
- Extension blocking/ management
- Email size restriction management
- Sender/ Recipient white- and blacklists
- Free domain aliasing
- User and permission management
